

**FMP Group (Australia) Pty Ltd
PV Disc Pad Finished Goods
Packaging Standard
(Bendix Brands)**

**Document No: PS26
Issue No: 07
Date: 10/12/2021**

INTRODUCTION

The details in this document are intended to outline a minimum standard for Finished Goods prepacked and supplied to FMP Group, relating to our Bendix own brands – namely GCT, 4WD, Heavy Duty and Ultimate.

PURPOSE

This document outlines the minimum expected packaging and shipping specifications, including but not limited to, the following elements:

- Quantity to be shrink wrapped together for each size
- Pallets
- Packaging and wrapping
- Case labelling
- Format of the packing list to be sent to FMP when a shipment is made

The supplier must agree with the standards outlined in this document and meet the minimum required expectations without variance.

Failure to meet these standards will result in non-acceptance of goods by FMP Group.

1. P.O.S. Carton Shrink wrapping

Parts will be wrapped together in the following quantities depending on the carton size and must be all facing the same way (customer requirement for Repco and Burson).

- Medium Cartons: 3 x cartons per shrink wrapped bundle
 - Special Cartons: 2 x cartons per shrink wrapped bundle
 - XL and XXL cartons: 2 x cartons per shrink wrapped bundle
- Please refer to the following pictures for placement of parts. Parts must be placed in the manner and orientation shown below:
- Barcodes must be clean and not smeared.
 - Barcodes must not be covered by seam joins of plastic shrink wrap.

“Medium box” bundle of 3: packed three sets side-by-side

“Special box” bundle of 2: packed two sets side-by-side

“XL & XXL box” bundle of 2: packed two sets side-by-side

2. Labelling of Cases

It is expected that all boxes and other packaging received by FMP are clearly labelled with unit quantities of the expected total delivery.

e.g. box 2/18 & 17/18 for example

If any part of the sequence is missing, FMP reserves the right to refuse the goods and return to the supplier.

It is a requirement that supplier put a listing on the outside of each case what is packed in the caseation of the product that is packed in each case. The list must have:

FMP SAP NO: 2400XXXXX (this is on our PO:)

Description: DB1234 GCT (this is on our PO:)

Quantity: how many in the case

IMPORTANT NOTE: Pack the same part number together on a pallet or in a case. DO NOT have the same part number in multiple layers throughout a case or pallet. This makes the unpacking process much quicker.

Below are examples of acceptable labelling:

PO numbers and products listed with count

Pallet	Invoice	PO	Material	Description	Qty
1	ABCDE190920	4500800157	240010194	SET DB1967 HD	72
1	ABCDE190920	4500230015	240010202	SET DB1973 HD	144
2	ABCDE190920	4500400115	240013020	SET DB2203 HD	90
3	ABCDE190920	4500100157	240010295	SET DB1956 HD	84

3. Delivery Paperwork

A delivery docket from the supplier must accompany any material, product or part delivered to FMP Group. For each delivery one copy of the master packing list must be attached securely to the goods.

- Each packing slip or delivery docket from the supplier must have the correct quantities of goods being delivered clearly stated on the paperwork.
- All paperwork must be attached to the outside of the packaging and clearly visible. Any goods received with paperwork inside the packaging will not be accepted. If paperwork is not able to be attached to the outside of packaging, it must be handed to the appropriate FMP Group employee on delivery of goods.
- In most cases FMP will provide a template for the supplier to use as a packing list. We will supply this electronically in an excel format. We require it in this format for our warehouse management system. If you are having any IT issues, or unable to use or complete the packing list in this format please contact us for assistance. We will also advise you to make any changes to the template if required.

If delivery paperwork does not meet the above criteria, FMP Group reserves the right to refuse any goods until the correct paperwork is supplied.

4. Shipping Case Materials

Goods are to be supplied in a large cardboard bin with full base and cap. Footprint must be no larger than 1120mm by 1120mm. The shipping case must have the 4 wooden corner braces supporting the load and not the product (from floor level to top and with a wooden top layer).

✓ Shipping case

✓ Edge supports

✓ Load properly supported

✓ Wrapped for shipment

5. Container loading

Shipping containers must have at least 150mm of unused/free floor space immediately inside the container doors. This is to enable the overlap of FMP's container unloading ramp. Any non-complying containers will be sent offsite and unpacked at the supplier's cost.

6. Problem Resolution

If there is a dispute between FMP Group, the supplier and/or a carrier regarding goods to be delivered to FMP Group, the first point of contact for resolution should be the supplier.

FMP Group will uphold the standards outlined in this document and reserve the right to refuse any goods or materials that do not conform to the guidelines mentioned herein.

FMP Group Buyer/Planner contact details:

Traded Goods Buyer	(03) 5327 0302
Supply Chain Manager	(03) 5327 0230

Any future updates to this standard will be posted on our website at www.bendix.com.au.
